# Detailing Packages

## 1 Day Detail

- Vehicle thoroughly pre-washed, degreased and tar deposits removed using a combination of degreasers and tar removers followed by a wash with a pH-neutral shampoo and soft natural lambs-wool mitts
- Wheels, arches, and shuts thoroughly cleaned and decontaminated with non-acidic, using premium products
- Spare wheel and wheel-well cleaned
- Vehicle dried carefully using a combination of extremely soft, plush towels, drying lubricant, and warm air only
- A high-quality sealant or wax is then carefully applied to the bodywork
- A protective wheel sealant is applied
- Tyres are pre-cleaned to remove traces of previous dressing, then new dressing is applied
- Any unpainted plastics are dressed
- Exhaust tips are polished with a premium protective metal polish
- Glass is thoroughly cleaned inside and out
- Interior surfaces are wiped down and dressed with a non-silicon dressing
- Interior vacuumed and left clean and fresh

## 2-3 Day Maintenance Detail

This detail is designed to remove major paint defects and significantly enhance the colour and surface gloss of the vehicle. This service is for vehicles of all ages that have not had paintwork protected or has just lost its lustre after many years. The work involved will remove swirl marks, light scratches, wash marks and holograms caused by previous inadequate polishing and/or visits to the Bodyshop for paintwork. A multistage machine polishing process removes a minimal amount of the uppermost layer of paint to reveal "as new" paintwork beneath. Paint Depth readings are taken on every panel before machine polishing commences to ensure there are adequate levels to begin with.

### Includes

- Vehicle thoroughly pre-washed, degreased and tar deposits removed using a combination of our own formula wax-safe pre-wash, citrus degreasers and tar removers followed by a wash with a pH-neutral shampoo and soft natural lambswool mitts
- Wheels, arches, and shuts thoroughly cleaned with non-acidic, quality products
- Spare wheel and wheel well cleaned
- Vehicle surfaces and wheels chemically decontaminated and cleaned to remove all bonded contamination such as tar, tree sap and brake dust deposits.
- Vehicle dried using a combination of extremely soft, plush towels, drying lubricant and warm air
- Paint depth readings are taken with the use of an advanced paint thickness gauge
- The paintwork is meticulously machine polished using a combination of the best cutting compounds and finishing polishes to ensure perfect results
- The surfaces are cleaned with a specific pre-wax cleanser to ensure optimal bonding for a sealant or wax
- A premium grade wax or sealant is carefully applied to further enhance the finish and provide valuable protection for up to six months (sometimes more)
- A protective wheel sealant is applied
- Tyres are pre-cleaned to remove traces of previous dressing, then new dressing is applied
- Any unpainted plastics are dressed
- Exhaust tips are polished with a premium protective metal polish
- Glass is thoroughly cleaned inside and out
- Interior surfaces are wiped down and dressed with a non-silicon dressing
- Leather is cleaned and conditioned
- Interior vacuumed and left clean and fresh
- Exterior receives a final inspection and wipe down with a protective spray sealant

## **Motorbike Detailing**

This detail is designed to specifically for Motorbikes from front to back.

Whether Endurance, Motocross, Touring, Custom or Daily Runners, our products and tools cater to get into those intricate areas, with special attention to the Chrome Polishing on Wheels and Engine area. Oxidation treatment is also applied to any affected areas with Leather Treatment applied to seating.
